An Eckler Ltd. Company

The Intuitive Data and Content Management

espace™ is a Collaborative Data and Content Management Platform delivered as a web-based application. It is a fully integrated business toolbox, cross-platform, multi-purpose, web-based application, and with a desktop sync client as well as a mobile communication application. espace™ is focused on providing an intuitive user interface which allows users to complete tasks without fighting with complicated workflows. espace™ is fully managed by Eckler Ltd. meaning that the client only uses the espace™ without the overhead of operating it.

Main Features of espace™

Groups (Files Management System): Secure and confidential environment for file exchange and storage. Groups allow for simplified access control by adding and removing users from groups. Users can subscribe to receive events when changes are made in a group. Users can search for files or folders by using all or part of their names.

Conversations: Secure, confidential and user-friendly private communication, including file attachments of any size. Users can have conversations that can that last years with espace™ retaining full history as well as displaying activity messages like user membership changes, title changes, etc. Messages are immutable and can only be removed shortly after they are created. Conversations can also be exported as a PDF for cases when an offline copy needs to be retained.

Panoramas: Intuitive and flexible Structured Data system. Users can create tables that can house structured data with a few options for data types. This is great for todo lists, contact lists, reference tables, etc. Users can attach as many files, big or small directly to entries so relevant information can easily be associated.

Content Management System ("CMS"): Very user-friendly and intuitive approach for documents and rich content management. espace™ provides a simple interface that utilizes markdown to create rich content areas that can contain documents, images, hyperlinks, and embedded videos. These areas can be public or private.

Additional Features of espace™

- All files, attachments, and messages stored in espace™ are encrypted at rest using modern encryption technology.

- The base price for espace™ provides one Terabyte of storage. There is additional charge for more storage.

- espace™ uses simplified concepts for user access controls. Administrators cannot view or seize access of groups, conversations, or panoramas without the original owner receiving a notification.

- Annual SSL Certificates used to force encrypted communication with espace™ at all times are included at no extra charge.

- espace™ can be fully customized to suit a client's style, such as look and feel, logos, fonts, and colours. It can serve as the main website. Alternatively, espace™ can simply be set up with the default template. If a client's existing website is more complex, an additional charge may be required to fully integrate their website.

- The driving force behind espace™ is its user-friendliness while retaining feature-packed functionality in a secure environment. Once deployed, espace™ does not require any dedicated IT personnel to maintain it. All data is stored in Canada, however locating data in other regions also be accommodated.

- For users having access to multiple espace™, for example a large corporation using the Enterprise version of espace™, they can easily switch between each espace™ without logging out and back in.

- Espace™ currently supports English, French, Simplified Chinese, and Spanish, with ability to add any additional languages.

- espace™ provides web access through a secured URL of your choice, e.g. https://espace.ClientName.com. There is no need to use a Virtual Private Network ("VPN"), which at best are slow and unreliable, and at worst very cumbersome.

- espace™ can also be accessed with the desktop application. This provides users the ability to synchronize Groups on their desktop and to work efficiently while being offline or with large folder structures.

- espace™ has a mobile application that allows for convenient access to Conversations. This allows users to efficiently view all the Conversations that they have access to across all spaces associated with their account. All Conversations and messages within these Conversations are immediately synchronized with those in the web application.

Desktop Application of espace™

- Easy to install and use.

- File version history for all changes made through web or desktop.

- Compatible with Windows and macOS.

- Ability to toggle which groups to synchronize within the application.

- Protection against accidental deletion of entire groups.

- Full folder structures are synchronized to and from espace™.

- Included as a standard feature.

- Link to download.

Mobile Application of espace™

- Available in both the Google Play store and the Apple AppStore.

- Easy to use interface to view and participate in Conversations.

- Ability to view attachments as well as upload new ones to messages.

- Users can manage their Conversations directly from the mobile application.

- Included as a standard feature.

- Link to download.
